## Chapter 1: Entity Framework

- 1: Microsoft.EntityFrameworkCore.Database.Transaction[20205] An error occurred using a transaction.
- 2: InvalidOperationException: An exception was thrown while attempting to evaluate the LINQ query parameter expression
- 3: Microsoft Data.SqlClient.SqlException (0x80131904) New transaction is not allowed because there are other threads running in the session
- 4: An error was generated for warning  
'Microsoft.EntityFrameworkCore.Query.InvalidIncludePathError': Unable to find navigation specified in string based include path
- 5: What is Entity Framework Navigation in Asp.Net 6
- 6: \_context.SaveChanges is not working
- 7: [EF Core] How to Enable Sensitive Data Logging and Detailed Errors
- 8: How to Select Top Distinct Values from a LINQ Group by Results using Entity Framework Core

## Chapter 2: Docker

- 9: Solved: docker-compose build asp.net core 3.0 error rzc discover exited with code 150
- 10: docker: Cannot connect to the Docker daemon at unix:///var/run/docker.sock. Is the docker daemon running?.

- 11: Docker compose error while creating mount source path
- 12: docker exec -it ContainerID bash
- 13: latest could not be accessed on a registry to record its digest. Each node will access MyApp:latest independently, possibly leading to different nodes running different versions of the image
- 14: rm: remove write-protected directory '/var/lib/docker'?
- 15: Scaling Asp.Net 6 Application using Docker Swarm
- 16: Docker Container AspNet Runtime DateTime is Wrong

## Chapter 3: .Net 7

- 17: How to Access ASP.Net Core Application running in Kestrel from another Computer for Debugging
- 18: How to get a User ID in Asp.Net Core 3.1 (ClaimPrincipal) in a Service Repository
- 19: How to Call a Soap Web Service from Asp.Net Core 3.1
- 20: [Solved] Asp.Net Core C-Sharp Error: IOException: The process cannot access file because it is being used by another process

- 21: could not load System.ComponentModel.AsyncCompleteEventArgs
- 22: Performance Tuning Asp.net web app
- 23: Error The instance of entity type ModalType cannot be tracked because another instance with the key value {id: 7656544} is already being tracked.
- 24: Coding in Asp.Net 6 Best Practices and Performance Tips and Tricks
- 25: Asp.Net Core Error: InvalidOperationException: The database generated a null value for non-nullable property 'PropertyName' of entity type 'EntityName'. Ensure value generation configuration in the database matches the configuration in the model
- 26: how to use speech in asp.net core
- 27: AspNet Core Performance Tuning and Best Practices (C-Sharp 10 Enhancements)
- 28: How to update SelectListItem based on Filtered Category from another DropDown menu in MVC AspNet 6 Razor Syntax
- 29: InvalidOperationException: An error was generated for warning 'Microsoft.EntityFrameworkCore.Query.InvalidIncludePathError': Unable to find navigation 'EntityName' specified in string based include path 'AnotherEntity Name'.
- 30: An unhandled exception occurred while processing the request "The view 'ViewName' was not found. The following locations were searched"

- 31: How to get the last record of Entity Framework model data
- 32: equivalent of bit data type in C#
- 33: Could not execute because the application was not found or a compatible .Net SDK is not installed
- 34: NotSupportedException: Path was not rooted
- 35: Mvc authorization attribute not working AspNet 6
- 36: Unable to bind to localhost on the IPv4 loopback interface: An attempt was made to access a socket in a way forbidden by its access permission
- 37: BadImageFormatException: An attempt was made to load a program with an incorrect format. (0x8007000B)
- 38: Rounding Down to the Nearest Decimal Point in C-Sharp (AspNet 6)
- 39: How to Keep Decimal (in Cents) Precision without Truncating Zeros e.g. 0.04 as to 0.4
- 40: OverflowException: Value was either too large or too small for an Int32

- 41: SqlException: New transaction is not allowed because there are other threads running in the session
- 42: How to upgrade Asp.Net 5 Application to Asp.Net 6 Nuget Packages not upgrading
- 43: InvalidOperationException: No service for type Microsoft.AspNetCore.Identity UserManager 1[Microsoft.AspNetCore.Identity IdentityUser] has been registered
- 44: The type or namespace name 'HttpContextAccessor' could not be found (are you missing a using directive or an assembly reference)
- 45: found multiple publish output files with the same relative path "Conflict resolution target" Publishing AspNet 6 in Visual Studio 2022
- 46: Error MSB3021: Unable to copy file
- 47: Issues with Memory Cache TryGetValue always returns false
- 48: Microsoft.CSharp.RuntimeBinder.RuntimeBinderException: 'The call is ambiguous between the following methods or properties'
- 49: Cannot create a DbSet for "MyModal" because this type is not included in the model for the context. However the model contains an entity type with the same name in a different namespace
- 50: An error occurred during the compilation of a resource required to process this request. Please review the following specific error details and modify your source code appropriately

- 51: The configured execution strategy 'SqlServerRetryingExecutionStrategy' does not support user-initiated transactions. Use the execution strategy returned by `DbContext.Database.CreateExecutionStrategy()` to execute
- 52: Unable to stop debugging. Operation not supported. Unknown error: 0x800004005
- 53: `RuntimeBinderException`: 'System.Dynamic.DynamicObject' does not contain a definition for 'Modal'
- 54: Should I use `Configurer Await False` in AspNet 6
- 55: Unable to reattach to the process Visual Studio 2022
- 56: An Exception was thrown while attempting to evaluate the LINQ query parameter expression
- 57: `NotSupportedException`: Path 'wwwroot myfolder filename.txt' was not rooted
- 58: Return url is required
- 59: `ArgumentException`: String cannot be of zero length. (Parameter 'oldValue')
- 60: Publish has encountered an error. Build failed. Check the Output window for more details

- 61: Front-End Bootstrap Development Notes Tips and Tricks in MVC Asp.Net Core 7
- 62: RuntimeBinderException: The best overloaded method match for 'string.Replace(char, char)' has some invalid arguments
- 63: [hot reload not working] hot reload only works when saving css or svg files in visual studio 2019
- 64: How to Sign Out a User when Session Expires in ASP.NET Core
- 65: How to Use DisplayFor to Display Text from EF Core Data Annotation in MVC and Components

## Chapter 4: Research

- 66: Master not discovered yet, this node has not previously joined a bootstrapped (v7+) cluster Docker Container
- 67: What is New in ASP.NET Core 7 and EF Core 7 (Best Features)

## Chapter 5: Linux

- 68: docker-compose build: Can't find a suitable configuration file Linux Ubuntu

## Chapter 6: Docker-Compose

- 69: yml.parser.ParserError: while parsing a block mapping

## Chapter 7: Servers

- 70: How to Host DNX, DNU, DotNet Core CR in IIS

71: HTTP Error 500.19 Internal server error

72: [HTTP Error 500.30]: Failed to load coreclr.Exception message CLR worker thread exited prematurely

## Chapter 8: HTML5

73: MVC Form Error "Incorrect Content-Type"

## Chapter 9: SQL

74: There is no remote user 'distributor\_admin' mapped to local user '(null)' from the remote server 'repl\_distributor'.

## Chapter 10: Algorithms

75: RPlotExporter couldn't find Rscript.exe in your PATH and no R\_HOME environment variable is defined | BenchmarkDotNet
